Master Blueprint

Clean Master Edition — v14.0

The canonical, audited, institutionally-defensible specification

A three-layer normative specification (Constitution, Architecture, Implementation) of the SGTX platform — a non-custodial, non-marketplace, governor-governed trade execution infrastructure for cross-border commerce.

This Clean Master Edition supersedes v13.1 FINAL. It restructures the entire specification into Layer 0 (immutable constitution), Layer 1 (normative architecture), and Layer 2 (implementation specifications), eliminates over-claim vocabulary (production-ready becomes CORE_READY / PRODUCTION_CONNECTED), formalises the command/event taxonomy, and preserves the full v13.1 audit trail verbatim in Appendix E.

STATUS	INTEGRATION	AUTHORITY	EDITION
AUDITED	INTEGRATED	CANONICAL	v14.0

DATE OF ISSUE	2026-08-26
CLASSIFICATION	Internal Technical Master Specification
PREPARED BY	Master Blueprint Integration Engine
SUPERSEDES	v13.1 FINAL (preserved in Appendix E)
SOURCES INTEGRATED	SGTX v12.0 Main Blueprint plus Add-Ons Change-Set (1 to 28)
